

Le Hung Thien

Backend Developer Intern

lethien.dev@gmail.com | +84 397 551 218 | linkedin.com/in/lehungthien
github.com/thienel | lethien.dev/portfolio

Technical Skills

Languages: Go (Golang), SQL
Backend: Gin, GORM, PostgreSQL, MySQL
DevOps: Docker, Docker Compose, Nginx, GitHub Actions
Testing: Ginkgo & Gomega, Testify, Mockery
Architectures: Clean Architecture, Microservices (basic)

Education

FPT University, BS in Software Engineering Sep 2023 – Apr 2027
• **GPA:** 3.5/4.0; awarded Honorable Student of Semester
• **Scholarship:** FPTU1000 – Scholarships for students with outstanding achievements nationwide
• **IELTS 6.0 Overall** – British Council (2023)

Working Experience

Golang Developer Intern | Cybersecurity Company *Oct 2025 – Dec 2025*

Architected and developed a comprehensive internal management system (attendance, scheduling, remote work) serving **100+ employees**.

- Redesigned system following **Clean Architecture** principles, streamlined **25% redundant endpoints** and organized according to RESTful standards, improving maintainability and scalability.
- Refactored attendance API achieving **19-25x throughput improvement** (62→1,780 req/s), **96% latency reduction** (1.4s→56ms), and **44-79% CPU savings**, verified through 3 load tests.
- Developed custom **in-memory worker pool** (goroutines/channels) for async timekeeping and optimized **DB connection pooling** to handle high concurrency.
- Engineered robust **middleware** layer for request logging, **JWT** authentication, CORS, and intelligent **rate limiting** (IP/user/endpoint-based).
- Established high-performance logging (**Zap**, **Lumberjack**) and standardized codebase (error handling, DTOs) across all service layers.

Team size: 8 **Benchmark report:** lethien.dev/reports/benchmark_result.pdf

Technologies: Go, Gin, GORM, Zap, Lumberjack, MySQL, JWT, OTP/2FA

Project Experience

EV Warranty – Electric vehicle warranty management system github.com/thienel/ev-warranty

Full-stack EV warranty system with Go microservice backend, .NET backend, React TypeScript frontend, deployed via Docker Compose with Nginx on AWS EC2.

- Architected **Go** RESTful API using **Clean Architecture** with **Gin framework**, implementing 35+ endpoints with **98.6% test coverage** using **Ginkgo & Gomega** BDD framework.
- Implemented authentication with **RSA JWT** tokens, **Google OAuth 2.0**, and RBAC.
- Optimized **PostgreSQL** operations using **GORM** with transactional workflows, soft delete patterns, and integrated **Cloudinary SDK** for cloud storage.
- Designed **CI/CD pipelines** with **GitHub Actions** for automated testing, Docker builds, and **AWS EC2** deployments with path-based change detection.

Team size: 3 - Role: Leader **Duration:** Sep 2025 – Nov 2025 (2 months)

Technologies: Go, Gin, Gorm, PostgreSQL, Docker, Nginx, RSA JWT, OAuth 2.0, Cloudinary
